

INTERIOR PRODUCTS FOR

Behavioral *health*

Construction Specialties®

The architecture *of healing*

Because behavioral health patients are at an increased risk of self-harm, detachable material, potential ligature points, and barricades—sometimes overlooked in the general hospital environment—are major design concerns.

To protect patients and staff in high-risk areas, products need to withstand heavy use and possible misuse for an extended period of time. This material longevity also results in decreased maintenance costs and increased useable space.

Our goal is to help you design, build, and maintain safe environments that encourage healing. Bring your vision to life and let us help you help your patients.

THERMOFORMED CORNER

Strong walls with a purpose

Walls in behavioral health facilities are capable of doing several things—keeping patients safe, assisting with wayfinding, and promoting healing through inspiring and calming imagery. Acrovyn by Design® can be your one-stop shop for all those attributes. Featuring an easy-to-clean texture, Acrovyn® is also antimicrobial and antifungal—offering added safety.

This impact-resistant rigid wall covering can withstand patient force and is supplied with pick-resistant caulk. We can also thermoform Acrovyn by Design to create bespoke protective sections for corners. Plus, installing a full wall mural means there won't be any spaces that can be picked at or chipped. Why not make it that easy?

CHILDREN'S HOSPITAL OF PHILADELPHIA
PHILADELPHIA, PA
ACROVYN® WALL COVERING IN 3 TEXTURES

The primary purpose of Acrovyn in any room is to protect the walls. In this sensory room at the Children's Hospital of Philadelphia, Acrovyn does more.

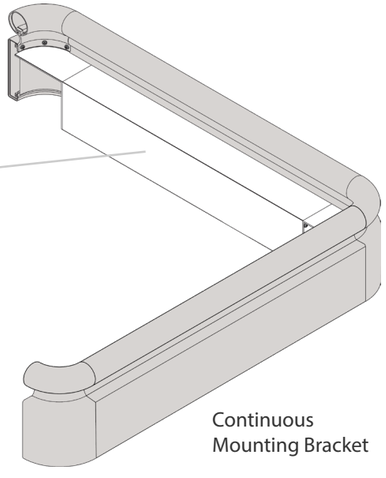

Located in the Behavioral Health and Crisis Center, where comfortable surroundings for children and adolescents are especially important, this textured Acrovyn offers kids a tactile object to touch. The hospital staff doesn't need to worry about dents or scuffs on the walls or about germs—even with the textures, Acrovyn is easily cleanable.

A firm grip on stability

Handrails can be the difference between mobility and immobility for patients, making them important in all healthcare settings. As with many other products, handrails for behavioral health need to take an extra step in patient safety—which is why we offer features like continuous mounting brackets.

HRB-35

These behavioral health handrail models are available with our optional Quick Lock™ mounting bracket.

Open the door to patient safety

Durability is paramount for behavioral health products, which makes Acrovyn® Doors well-suited for facilities where doors battle constant wear and tear from carts, beds, and equipment. And even though these doors are tough, they don't need to look institutional—various finishes and aesthetic options are available, including customizable patterns and visual messaging.

Additionally, several of our door options serve specific needs that promote healing and could help save lives.

BARRIER RESISTANT
Features a smaller compact door, allowing staff easy access into a room if a barricade is used on the other side.

SOUND TRANSMISSION CONTROL
Available in a variety of STC ratings, these doors alleviate unwanted noise by reducing sound energy transferred through door openings.

HUSH CURTAINS IN CSELECT FABRIC

Close the curtain on disturbances

Privacy is essential in healthcare environments, and one of the simplest ways to provide it is by using curtains. CS HUSH Curtain® takes an extra step by providing not only visual privacy but also auditory privacy. Using proprietary acoustical panels that help absorb and block sound, HUSH reduces noise, giving patients a more private space to have discussions with staff and reducing auditory-related irritation.

Pair it with our exclusive CSelect™ Fabrics for designs inspired by earth's natural elements, which also contribute to a calm and peaceful atmosphere.

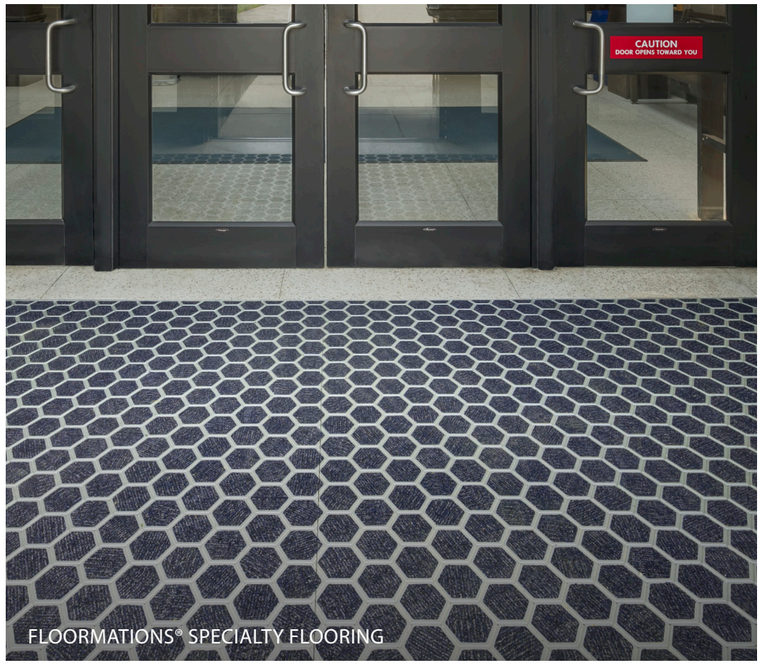

SBC30 BREAKAWAY CARRIER

Our curtains are available with ligature-resistant breakaway carriers. With the breakaway carrier, parts don't break off during an "event." This innovation eliminates the possibility of patients harming themselves or others with loose parts that could threaten life and safety.

The first step to steady footing

Avoiding slips, trips, and falls is critical, especially when we're talking about patients. But we know that behavioral health facilities need solutions that go the extra mile for protection. In addition to keeping floors clean, some of our entrance flooring solutions can offer another safety benefit—our GridLine® and recessed Floormations® require special tools to pull panels up, making them even more behavioral-health friendly.
