

MODEL GTW-300/400 & GTWC-300/400 INSTALLATION INSTRUCTIONS

IMPORTANT INFORMATION

Prior to the commencement of Installation, all materials **MUST** be inspected for Damage. Any damage must be reported to CONSTRUCTION SPECIALTIES, INC., as soon as possible, so that replacement materials may be furnished without delay.

All work must be completed as per Architect's Approved "Shop Drawings", and in accordance with these Installation Instructions. When installation is complete, all materials must be protected from damage until the Architect's FINAL INSPECTION.

All materials should be arranged in the order that they are to be installed. All hardware required for each portion of the work should be placed with the appropriate materials.

Please review all Approved Shop Drawings and this Document to familiarize yourself with all the details and components of this assembly.

IMPORTANT:

READ THROUGH ALL INSTRUCTIONS PRIOR TO STARTING INSTALLATION

9/4/13

Notes:

Before beginning installation, review the architectural drawings and approved Construction Specialties Inc. shop drawings to familiarize yourself with the joint cover models and locations.

Check all of the joint cover components to confirm that the correct joint cover model and size have been received. Also, check for materials that may have been damaged during shipping. Report all incorrect and/or damaged components to C/S at 800-233-8493.

Read through all the steps of these instructions prior to beginning work.

STEP 1

PREPARE BLOCKOUTS

Step 1:

- 1.1) The blockouts must be prepared to receive the joint cover. (Note: The blockouts must be level across the width of the joint.)
- 1.2) Blockout depths will typically be 5/8" [15.90mm]. (See detail above.)
- 1.3) Blockout width will typically be 3 1/2" [88.90mm]. (See detail above.)

STEP 2

TURNBAR INSTALLATION

Note:

- If a C/S Fire Barrier is to be installed in the joint, please review the Fire Barrier Installation Instructions supplied, and if required install the Fire Barrier **BEFORE** installation of C/S Seismic Expansion Joint Aluminum Frames.
- If a Vapor Barrier/Waterstop is to be installed in the joint, please review the Vapor Barrier/Waterstop Installation Instructions supplied, and if required install the Vapor Barrier/Waterstop **BEFORE** installation of C/S Seismic Expansion Joint Aluminum Frames.
- If there is an expected temperature change of 20°F(+) daily, leave a 1/16" gap between Frames for 10' sections or an 1/8" gap between Frames for a 20' section due to the thermal expansion of aluminum. Caulk (by others) in between Frames to seal gap.

Step 2:

- 2.1) Begin installation of the Frames by placing a length of Frame into the blockout. Cut the Frame to length as needed. The Frame is to sit level, flat and parallel to the edge of the joint.
- 2.2) Using the Frame as a template, drill holes for the C/S supplied anchor bolts per manufacturer's guidelines.
- 2.3) Anchor the Frame to the wall using the C/S supplied wall fasteners following the manufacturer's guidelines.
- 2.4) Repeat this installation procedure for opposite side of the joint and for any additional lengths of Frame. Skip to Step 3 before installing any additional lengths of Frame.
- 2.5) For additional lengths of Frame, apply "Super Glue" adhesive (Not Supplied) to half of the Alignment Pin. Insert the adhesive portion of the pin halfway into alignment slots of Additional Frame. Allow the adhesive to set. **IMPORTANT: PLEASE OBSERVE THE SAFETY PRECAUTIONS ON THE ADHESIVE CONTAINER.**
- 2.6) Align the loose Frame with the previously installed Frame and slide together. Make sure the Alignment Pins slide into the slots of the previously installed Frame.

Note: Do not install last section of Frames until after Step 3.

STEP 3

TURNBAR INSTALLATION

TURNBAR LOCATION

INSERTING TURNBAR

SLIDE TURNBAR TO PROPER LOCATION

Step 3:

- 3.1) Begin installation of the Turnbars by determining the number of Turnbars needed for the length of the run.
- 3.2) Determine the location of the Turnbars (see detail above) and mark the location on the Frames with a pencil.
- 3.3) Slide the Turnbars into the Turnbar receivers of the Frames (see detail above) and position the Turnbars to the marked locations apply a small piece of masking tape to hold turnbar in place.

Notes: The orientation of the Turnbars should all be the same direction or the system will not function. Please note the orientation of the Turnbars in the details above (the side with the part number on it faces up). Models GTPW & GTRW do not require any Turnbars.

STEP 4

TURNBAR INSTALLATION

INSERTING TURNBARS

Step 4:

- 4.1) Begin installation of last section of Frame by cutting the Frame to length as needed. The Frame is to sit level, flat and parallel to the edge of the joint.
- 4.2) Lay Frame beside joint on wood blocking as shown in detail above.
- 4.3) Determine the number of Turnbars needed. Slide the Turnbars into the Turnbar receivers of the Frames (see detail above), position the Turnbars to proper locations, mark location on Frames and apply a small piece of tape to hold the turnbar in position.
- 4.4) Place Frames with Turnbars into blockout. Using the Frames as a template, drill holes for the C/S supplied wall fasteners per manufacturer's guidelines.
- 4.5) Reposition Turnbars to the marked locations.

Notes: The orientation of the Turnbars should all be the same direction or the system will not function. Please note the orientation of the Turnbars in the details above (the side with the part number on it faces up). Models GTPW & GTRW do not require any Turnbars.

STEP 5

CENTER PLATE INSTALLATION

Note:

- If there is an expected temperature change of 20°F(+) daily, leave a 1/16" gap between Plates for 10' sections or an 1/8" gap between Plates for a 20' section due the thermal expansion of aluminum. Caulk (by others) in between Plates to seal gap.

Step 5:

IMPORTANT NOTE: Over tightening of the Cover Plates to the Turnbars will cause them to break. It is important to follow these instructions.

5.1) Begin installation of the Center Plate by first placing a length of the Center Plate beside the joint and cutting required length.

5.2) Center the Plate over the joint/Frames. Make sure that the holes of the Center Plate and Turnbars are aligned.

Note: You can do this by shining a light in the holes if necessary and using a wire to line up the holes.

5.3) Using the C/S supplied wood screws attach the Center Plate to the Turnbars. **DO NOT FULLY TIGHTEN.**

5.4) Once all of the wood screws have been partially fastened, go back through and tighten until the head of the screw is flush with the top of the Center Plate plus an additional 1/4 turn.

5.5) For additional lengths of Center Plate, apply "Super Glue" adhesive (Not Supplied) to half of the alignment bar and insert halfway into alignment slot of the previously installed Plate (see detail above). Allow the adhesive to set. **IMPORTANT: PLEASE OBSERVE THE SAFETY PRECAUTIONS ON THE ADHESIVE CONTAINER.**

5.6) Repeat Steps 5.1 through 5.4.

STEP 6

GTWC PLATE INSTALLATION

MODEL - GTWC

Step 6:

Note: Turnbars are not required for Model GTWC.

-If there is an expected temperature change of 20°F(+) daily, leave a 1/16" gap between Plates for 10' sections or an 1/8" gap between Plates for a 20' section due the thermal expansion of aluminum. Caulk (by others) in between Plates to seal gap.

- 6.1) Begin installation of the GTWC Plate by first placing a length of the Center Plate beside the joint and cutting required length.
- 6.2) Measure 1 1/2"(38.10mm) above wall surface and mark a line on the wall surface.
- 6.3) Align the top of the vertical flange of the Center Plate with the line.
- 6.4) Using the Center Plate as a template, mark and drill the location for the C/S supplied wall fasteners.
- 6.5) Attached the Center Plate using the C/S supplied wall fasteners in accordance with the manufacturer's guidelines.
- 6.6) Repeat these installation instructions for any additional lengths of Center Plate.

STEP 7

MODEL - GTWC

Step 7:

- 7.1) Cut the length of gasket as needed for the run.
- 7.2) Install the gasket into the aluminum frame and center plate receivers. In most cases hand pressure will be sufficient to seat the gasket into the receivers. Lubricating the push in areas by spraying them with a light mist of water will also ease installation. If necessary, you may use a rubber mallet and a wood block to gently seat the gasket flush with the top surface of the frame and the center plate.

Splicing: (If Required)

- 7.3) Wipe the ends to be bonded with alcohol (or similar to remove all dirt, moisture, and oils that might affect the bond).
- 7.4) Apply "Super Glue" adhesive (Not Supplied) to the entire cut surface of the seal. **IMPORTANT: PLEASE OBSERVE THE SAFETY PRECAUTIONS ON THE ADHESIVE CONTAINER!**
- 7.5) Align and bring the ends of the seals together. Apply pressure against the ends of the seal until adhesive has set.

STEP 8

COMPLETE INSTALLATION

MODEL - GTW

MODEL - GTWC

Step 8:

- 8.1) When installation of the C/S Wall Expansion Joint Cover has been completed, remove all residue and foreign matter from the area and joint cover.
- 8.2) Clean the C/S Joint Cover and adjoining surfaces with a cleaner that is adequate for surface.
- 8.3) Protect the Joint Cover until the Architect's final inspection.
