

Installer Checklist

The following items are important for an installer to verify prior to the installation of a **recessed** CS Entrance Flooring System:

- Is the recess free of debris and moisture?
- Is the recess flat and smooth?
 - High spots should be ground flush and low spots should be raised with grout.
- Is the depth throughout the recess consistent and correct for the specified model?
 - Self leveling grout can be used to raise the recess to the correct depth.
- Are the overall width, length and diagonal dimensions correct?
- Are the perimeter side walls straight and smooth?
