

At-A-Glance

Snap Lock panels allows for ease of removal for cleaning curtains while individual panels make inventory management simple.

CASE STORY

Valley Hospital Medical Center *Las Vegas, NV*

About the Project

Valley Hospital was looking for a privacy curtain system that would allow for a modular curtain size to alleviate the need for custom-sized curtains. The system had to allow for the different track lengths utilized in various areas throughout the facility.

Design Goals

Working closely with the facility staff, CS was able to develop a system that addressed the issue of custom curtain size as well as several other staff concerns like the ease of change-out, laundering, inventory management, and quality standards.

Solution

CS' Snap Lock curtain system incorporates uniform-sized curtains which can be used separately for smaller curtain track runs or with additional panels for longer tracks. Snap Lock also conveniently permits the body of the curtain to be separated from the mesh without the use of a ladder, this design allows for quick removal

and reinstallation of curtains for laundering without having to deal with cumbersome curtain carriers. Because the curtain fabric can be specified from a wide variety of manufacturers, CS can provide privacy curtains made to suit a full spectrum of design aesthetics.
