

Engineered Product Solutions

---

**PLATFORM**™  
SOLUTIONS

## THE NEXT LEVEL OF INNOVATION

---

What's next in modular and seismic solutions is here. Introducing CS Platform™ Solutions, a game-changing collection of steel seismic stair solutions and modular stairs, balconies, and awnings. We're taking building resiliency and efficient construction practices to the next level with durable solutions that are easy to specify, decrease construction schedules, and most importantly, enhance safety.

DriftReady™ Stairs

Modular Stair Systems

Modular Balcony Systems

Modular Awning Systems

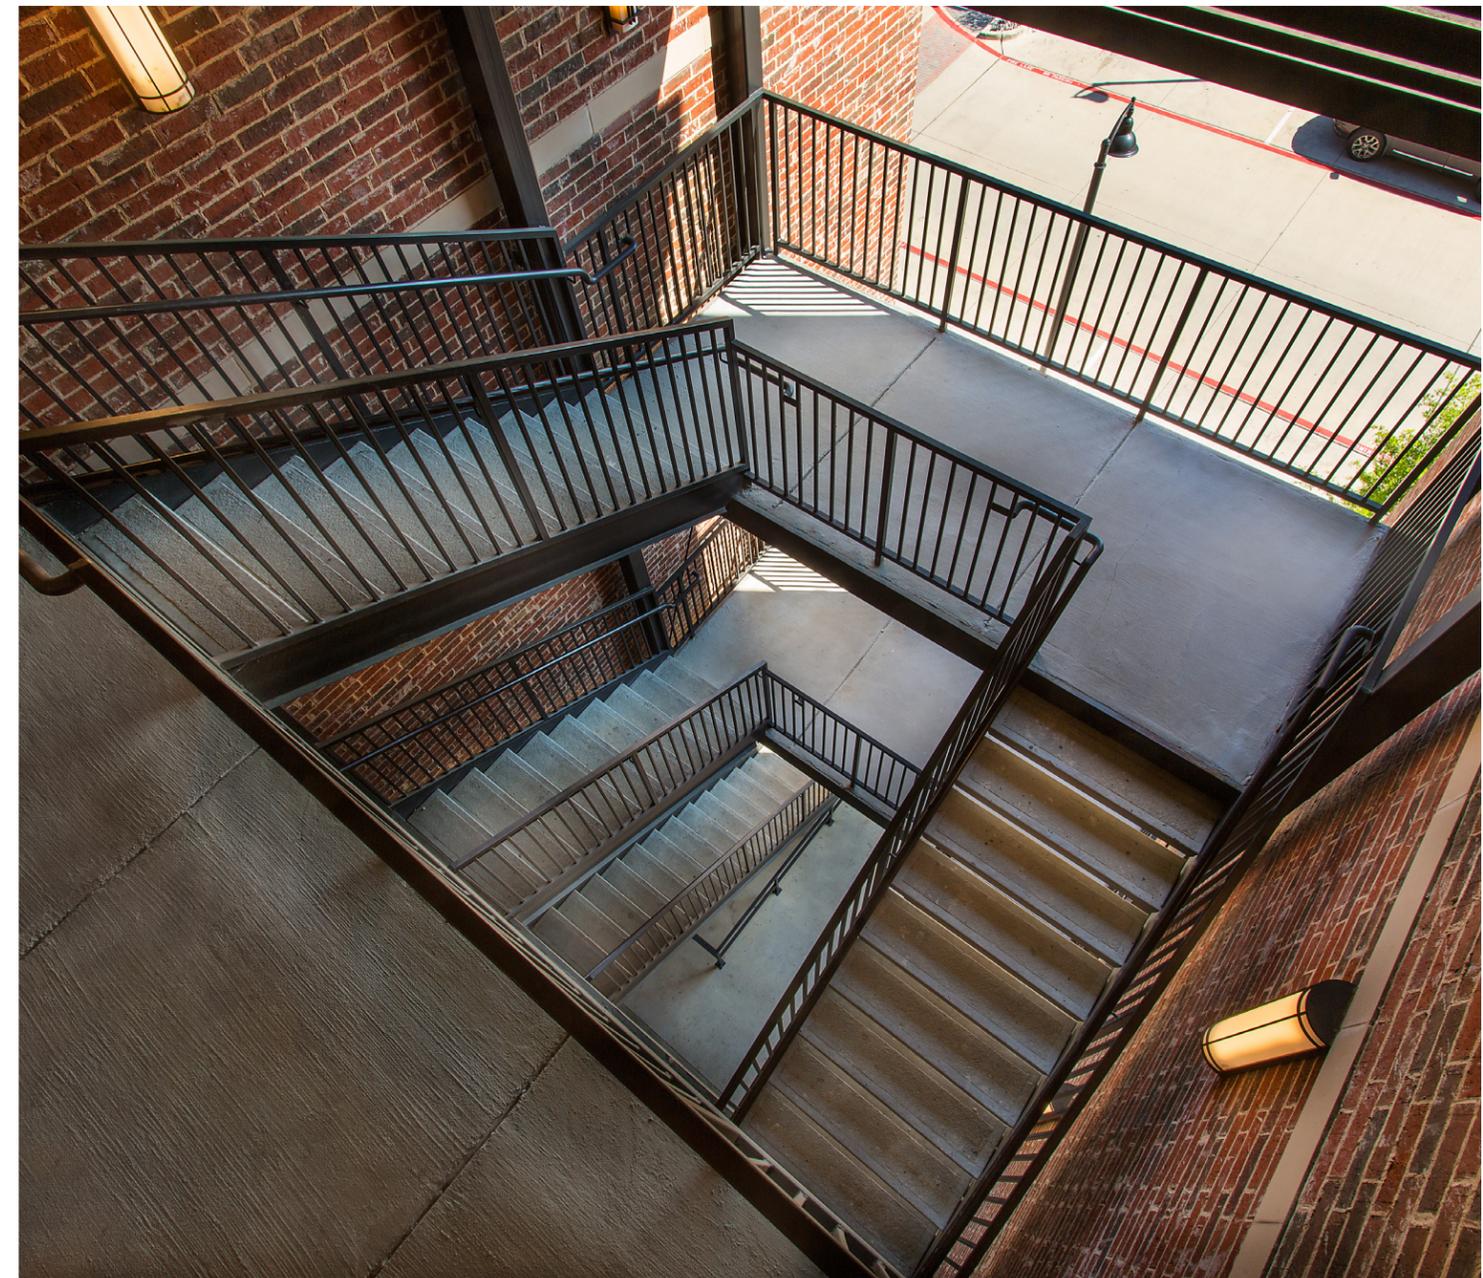

## DRIFTREADY™ STAIRS

---

The backbone of safety.

Your expert in seismic movement is now your resource for stairs. For over fifty years, Construction Specialties has been solving building movement challenges. Now, meet DriftReady Stairs. Its patent-pending technology keeps the stairs stable at rest, yet flexible when a building moves — much like a spine in the human body. DriftReady Stairs ensures occupants and first responders can enter and exit a building safely after building movement.

## MODULAR STAIR SYSTEMS

---

Stairs, simplified.

Modular Stair Systems (MSS) were developed to alleviate many of the issues surrounding multi-level stair erection. By fabricating and shipping complete modules, installation time is significantly shortened and allows the contractor to build a secure stair system earlier in the construction process.

## MODULAR BALCONY SYSTEMS

---

Elevate your expectations.

The Modular Balcony System (MBS) was designed and engineered to decrease the water intrusion risk and coordination time, while increasing the speed of installation of balconies during construction. MBS arrives in pre-designed kits when you need them, allowing for an easy bolt-on installation at the jobsite.

## MODULAR AWNING SYSTEMS

---

Awning installation made easy.

The Modular Awning System (MAS) was designed and engineered to increase the speed of installation of awnings during construction. MAS arrives in pre-designed kits when you need them, allowing for an easy bolt-on installation at the jobsite. The units have multiple pre-finished options.
