PTCP Series

Model PTCP

This seismic cover system is specifically designed for parking structure applications. An additional dampening system prevents the cover from clunking noisily under dynamic traffic loads. These systems are designed to accommodate seismic and live load movements, including vertical displacement of the adjacent slab without damaging the cover system.

Advantages

- Sound dampening pad eliminates noise
- Accommodates vehicular load, seismic, and live load movements including vertical deflection
- Superior hold down and connections to prevent loosening of plate
- Vapor Barrier included
