

Scope of the CS Environmental Management System

The scope of the Environmental management system operated by Construction Specialties Australia applies to the fabrication & supply of wall protection systems comprising handrails, crashrails, bumper guards, corner guards, door and frame cladding, entrance mats and grids, expansion joint covers, louvers, sun controls and explosion vents. Design of product and service is realized within facilities based in the United States and is outside the scope of the Construction Specialties Australia EMS.

Construction Specialties (CS) is a privately-owned global group, founded in the United States with a satellite operation in Australia. Its Australian head office and main manufacturing plant is located in Enfield, NSW.

CS specializes in the installation of its products into buildings, across a spectrum of business sectors including healthcare, transport, retail, education, leisure and commercial offices.

Construction Specialties is strongly committed to the protection of the environment, and we work hard to minimise our environmental impacts right across the board - from manufacture to distribution. We control our waste management & recycling processes and ensure that contractors and suppliers are aware of our environmental requirements. Our environmental protection goals include preventing pollution, ensuring our site operations don't endanger health or safety, meet all statutory and regulatory requirements and we are constantly looking for ways to reduce our environmental impacts even further.

This scope is available to all internal & external interested parties.
