

Project: Tampa Bay History Center
Tampa Bay, FL

Architect: Verner Johnson and Associates
Boston, MA

Products: C/S 100-10 Perform Sun Controls

C/S Perform perforated Sunshades are the dominant aesthetic feature on this building's facade. Architects Verner Johnson and Associates specified 30" deep Perform Sunshades to cover the entire glass front of the museum. The building is designed to connect interior and exterior spaces and the Perform sunshades attached to the curtain wall provide unobstructed views of the exterior. Entering sunlight is dappled allowing light without intense heat and blinding glare.

A Smithsonian Institution Affiliate, the History Center includes three floors of permanent and temporary exhibition space focusing on 12,000 years of Florida history. Exhibits include coverage of the Tampa Bay area's first native inhabitants, Spanish Conquistadors, and historical figures who shaped the area's history. The History Center features a museum store, a research center, a map gallery, event hall, and a café. Located along the Riverwalk in Tampa's bustling Channel District, the History Center serves residents and nearly 3 million tourists annually. The Center was awarded a Silver LEED certification from the U.S. Green Building Council in 2012.

At a Glance

- C/S Perform Sunshades allow light in without excessive heat
- Cover entire glass front of museum
- Provide unobstructed view to the exterior
- Are a dominant design feature to facade
- Cradle to Cradle Certified™ Silver*
