## Perfecting Your Elevator Pitch During Renovation

- One elevator passenger can average four trips per day, resulting in 18 billion passenger trips per year nationwide.<sup>1</sup>
- Elevators may be the only option to move between floors for individuals with disabilities.
- High traffic areas such as elevator lobbies can show signs of serious damage without the right finish options. These areas should be designed with resiliency in mind.
- Timeless interior finishes should be protective, decorative and come in a variety of finishes.
- Replacing interior finishes of outdated or dilapidated cabs is more economical than replacing an entire elevator cab. *Please refer to ASME and local building codes to ensure that elevator finishes meet all building and safety standards.*

Elevator lobby and cab renovations do not have to be time-consuming or uneconomical. Acrovyn Wall Protection products, such as the reimagined Acrovyn Wall Panel line, serve double duty with unsurpassed durability and endless finish options, including Acrovyn by Design®. Simple mounting options reduce installation time for limited interruption. Discover countless surface options and interior inspiration by visiting [www.Acrovyn.com](http://www.Acrovyn.com).
